

MANISH KASHYAP

Vadodara, Gujarat | Associate Developer (Software) | AI-Native | Full Stack | Java
Phone: +91 7046894649 Email: mk2151431@gmail.com LinkedIn: [LinkedIn](#) GitHub: [GitHub](#) [Portfolio](#)

Summary

Software Developer (Fresher, 2027 Batch) who has built and shipped AI applications using Java, Spring Boot, Python, and LLM APIs (Gemini, OpenAI). Proficient in REST APIs, OOP, SQL/NoSQL databases, and Git. Routinely uses Claude, ChatGPT, Copilot, and Gemini to write, debug, and document code — always reviewing and correcting AI output before it reaches the codebase. Microsoft Azure Certified (DP-900) and NPTEL Elite awardee (Top 5%) in Computer Networks.

Technical Skills

Core Languages: Java, Python, JavaScript

Frameworks & Backend: Spring Boot, FastAPI, REST APIs, OOP, Spring Security, JWT, WebSocket

AI Tools & LLMs: Gemini API, ChatGPT, Claude, GitHub Copilot, Prompt Engineering, AI output validation

AI/ML Libraries: TensorFlow, spaCy, OpenCV, MediaPipe, DeepFace, Whisper, Librosa

Databases: MySQL, MongoDB Atlas, SQL, PostgreSQL

Frontend: React, HTML, CSS, Tailwind CSS

Cloud Platforms: AWS (EC2, S3, IAM, VPC), Microsoft Azure (DP-900 Certified)

DevOps & Tools: Docker, Git, GitHub, GitHub Actions, CI/CD Pipelines, Linux

Data Structures & Algorithms: Arrays, Linked Lists, Trees, Graphs, Sorting, OOP Design Patterns

Methodologies: Agile, SDLC, Software Testing, Debugging, Self-Directed Learning

Projects

Turing Body – AI-Powered MS Lesion Detection System [Live](#) [GitHub](#) **Jan 2026 – Present**

- Developed an MS lesion detection system coupling a TensorFlow CNN model with a Spring Boot REST API that scored 91% accuracy on the test set and served predictions to 3+ client interfaces with under 200ms average response time.
- Leveraged Claude and ChatGPT to reduce development time by 40% — applied to model integration debugging, boilerplate code generation, and test case authoring; verified 100% of AI-generated output prior to merging to production.
- Containerized the Spring Boot backend across 2 Docker environments (development and production); shipped a publicly accessible deployment on Vercel achieving zero-downtime releases across all sprint deliveries.
- Led Git branching strategy and code reviews across 3 contributors, managing 15+ pull requests; coordinated Agile SDLC across 4 sprint cycles with 100% on-time milestone delivery.
- **Tech Stack:** Java, Spring Boot, React, MongoDB Atlas, TensorFlow, REST APIs, Docker, Git, Vercel

Examiner – AI-Powered Virtual Interview Platform [GitHub](#) **Mar 2026 – Present**

- Architected an LLM-powered interview simulation platform across 3 modules (frontend, backend, ML service) supporting resume-based and subject-based interview modes, with AI-driven difficulty scaling based on candidate answer quality.
- Exposed 10+ REST API endpoints in Spring Boot for interview session management, resume parsing, and report generation; wired WebSocket to push AI-generated questions to the browser within 1 second of Gemini response receipt.
- Designed a Python FastAPI ML microservice orchestrating 6 AI models (Whisper, Librosa, OpenCV, MediaPipe, DeepFace, spaCy) to analyze candidate performance across 4 dimensions: speech, emotion, posture, and communication.
- Crafted Gemini API prompt workflows for 3 interviewer personas (Technical, HR, Domain Expert); cut irrelevant AI question rate by 60% by testing 15+ prompt variants and enforcing JSON output schema on every API call.
- Instituted AI output validation at every pipeline stage — implemented JSON schema checks and hallucination detection logic that rejected malformed responses before they reached the candidate, achieving a 0% corrupted-session rate.
- **Tech Stack:** Java, Spring Boot, React, Python, FastAPI, Gemini API, MongoDB Atlas, WebSocket, Whisper, OpenCV, Docker, Git

Work Experience

Software Development Intern (Project-Based) [Certificate](#) **Aug 2025 – Oct 2025**
byteXL TechEd Pvt. Ltd., Remote

- Delivered a full-stack AI/ML project within a 3-member Agile team across 2 sprint cycles, meeting 100% of milestones on schedule under direct industry mentor oversight.
- Constructed 5+ Java Spring Boot REST API endpoints consumed by the team frontend; incorporated 2 database modules and trimmed average backend query response time by 30% through targeted SQL optimization.
- Deployed ChatGPT and GitHub Copilot to write boilerplate, generate test scaffolding, and draft documentation; reviewed every AI suggestion against project requirements and rejected or corrected output in 3 out of 10 cases ahead of committing.
- Authored unit and integration tests across 3 modules covering 80%+ of critical code paths; identified and resolved 8+ bugs ahead of the final deployment review, resulting in zero post-deployment defects.

Education

Bachelor of Technology in Computer Science Engineering (AI & ML)	Aug 2023 – May 2027
<i>Parul University, Vadodara, Gujarat</i>	<i>CGPA: 8.6 / 10.0</i>
– Relevant Coursework: Data Structures & Algorithms, OOP, Operating Systems, Computer Networks, DBMS, Software Engineering – Technical Training: AWS Cloud Fundamentals, Microsoft Azure, Linux Administration, DevOps Fundamentals, AI/ML with Python	

Certifications

– Microsoft Certified: Azure Data Fundamentals (DP-900)	Apr 2024
– Computer Networks and Internet Protocol – NPTEL — Elite + Top 5% nationwide	Apr 2025
– AI/ML Sprint – Project-Based Learning Certificate — byteXL TechEd Pvt. Ltd.	Oct 2025
